

The Through-Line — claim, content map, gather list

Alex Ji · FlyRank AI-Fluency · Week 3 "The Through-Line" · full layout: [through-line.pdf](#)

One person: hiring managers / tech leads at AI startups · One action (from Week 1): book a 15-minute intro call

1. One-line claim

I turn "we should use AI" into production agent systems you can audit.

Names the customer's problem ("we should use AI"), the outcome (production agent systems), and my differentiator (you can *audit* them). One sentence, meant to be the thing a visitor remembers.

2. Content map — pages → sections → case → CTA

Home is a single scrolling page. Every section's CTA ladders up to the one action: **Book a 15-min call**.

#	Section (in order)	Content	Which case	CTA
1	Hero	The claim + 3 proof chips (54★ · 1,300+ tests · Navy veteran · MS CS 4.0)	—	Book a 15-min call (primary)
2	Work — lead with the strongest	3 cases, problem → decision → result	Orallexa (lead — 54★, most external validation) → Solo Founder OS → Shadow	each card: <i>Book a call</i> (primary) + <i>View repo / live demo</i> (secondary)
3	About	4-line bio (Navy → MS CS 4.0 → AI engineer) + real headshot	—	Book a call
4	Contact	The one action, friction-free	—	Book a 15-min call (Calendly) + email + GitHub/LinkedIn

Why Orallexa leads: it carries the most external proof (54★, 1,300+ tests, a live demo) — the strongest work goes first so a 20-second skim lands on the best evidence.

Optional deep-dive case pages (/work/orallexa , /solo-founder-os , /shadow) — each: Problem → Decisions → Outcome → **Book a call**. Kept optional so the build stays lean; the Home cards can link out only if a reviewer wants depth.

CTA ladder (all roads → one action): View repo / See live demo (curiosity) → read a case → **Book a 15-min call** (the one action). No section dead-ends; every one offers the call.

3. Still need to gather (honest — so build week isn't blocked)

Proof	For	Status
Screenshot — Orallexa 5-voice debate output / live demo	Work · Orallexa	☐ capture (real, logged-in browser)
Screenshot — Solo Founder OS PyPI page + green test run	Work · Solo Founder OS	☐ capture

Proof	For	Status
Screenshot — Shadow <code>/api/deliberate</code> JSON + hash-chain audit	Work · Shadow	 capture
Real headshot (neutral background)	About	 take photo
Calendly link (the CTA depends on it)	every CTA	 set up
Live demo link confirmed clean (<code>orallexa-ui.vercel.app</code>)	Work · Orallexa	 verify it loads
Reconcile the test-count numbers (Orallexa 745 vs 1,300+ badge)	Hero + cases	 pick one number, use everywhere
Testimonial from Lora Levitchi (banking collaborator)	Shadow	 optional — ask
FlyRank ML capstone (refresh-scoring model)	future 4th case	 in progress — becomes a case when done
Domain <code>alexji.dev</code>	the site itself	 planned week 6–7

Repos are already public (no gathering needed): `orallexa-ai-trading-agent` , `solo-founder-os` , `shadow-mentor` .
